RPA

For AWS customers, baioniq is containerized and deployed on AWS. It provides a modular solution that allows modern enterprises to fine-tune LLMs to incorporate domain-specific data and perform enterprise-specific tasks in four simple steps.

baioniq VALUE PROPOSITIONS

Your Data, Your Model
customers fully control and own their data and LLM

Customizable UI & APIs for integration
customize the UI and easily integrate with existing systems

Prompt Engineering and fine tuning
access curated datasets for prompt engineering

One-stop Gen AI lifecycle management
turnkey platform for fully managing and maintaining your Gen AI applications

SOTA domain adaptation techniques
domain-adapt models with accuracy using Graph & sub-graph retrieval techniques

Responsible AI Guardrailing
ensure generated outputs are grounded in facts, safe and helpful

IMPACT

Productivity Enhancement: baioniq boosts knowledge worker productivity, enabling faster and smarter completion of tasks.

Streamlined Integration: Offers a simple, scalable, and sustainable integration pathway into existing workflows, reducing complexity.

Operational Cost Reduction: Reduces costs associated with data analysis, content generation, and customer support by optimizing efficiency.
Tailored Solutions: It facilitates the adoption of Generative AI for specific industry tasks, aligning AI with business needs.

Accelerated Time-to-Market: Helps companies get their AI solutions to market quicker, gaining a competitive edge.

Responsible AI: Adheres to responsible AI principles, ensuring ethical and compliant AI usage.
