

GenAI-powered Document Processing Platform

Now upgraded with Generative AI capabilities, organizations can tailor the document processing results based on their specific needs and document data.

About QDox

QDox, powered by Quantiphi's Active Learning AI, excels in precise document processing and data generation for advanced analytics. With the infusion of Quantiphi's GenAI capabilities, QDox GenAI can transform into a robust enterprise-ready generative AI platform, facilitating the integration of generative AI into document processing. It will allow access to functionalities such as LLM-based search, indexing, and active queries, fostering innovation and driving tangible business outcomes.

With QDox, businesses of all sizes can create custom document processing workflows to extract and utilize key information from a variety of structured and unstructured documents.

How Does it Work

Ingest

Documents are ingested from multiple sources.

Classify

Custom-built workflows built with QDox automatically identify and classify the documents based on the type.

Extract

Data extraction occurs using pre-trained ML models specific to the use case. Any sensitive information or personal information can be redacted.

Validate

The Human-in-the-loop modules help review errors and approve documents with low extraction confidence at predetermined checkpoints.

Integrate

QDox integrates with downstream business applications to manage the extracted data & generate insights.

Capabilities

Customized Document Processing Workflows - With pre-trained models for more than 100+ documents across industries and developer tools, enterprises can create automated workflows for their document processing requirements.

Enhance Knowledge Discovery From Documents

Analyze and categorize large volumes of structured and unstructured data to automatically extract relevant information. With QDox, users can easily discover and fetch relevant knowledge from document repositories.

Enable Intelligent Search

QDox goes beyond keyword-based searches. It understands user queries, interprets context, and provides accurate and contextually relevant results buried within complex documents or datasets.

Support Decision-Making

Analyze, summarize, and rewrite complex information, such as research reports or market data to provide concise and easily digestible insights. By extracting key information from existing LLMs and presenting it in a user-friendly manner, it can assist decision choices.

Core Features

Automated workflows for categorizing diverse documents

Expedited custom development with pre-built components and intuitive UI

API integration with BI, reporting apps, CRMs, ERPs, etc.

Anonymizing and redacting PII & sensitive data

Data extraction based on taxonomies, ontologies, or existing metadata

- Key-Value Pairs
- Images
- Tables/Multi-format text
- Signatures
- Checkbox

GenAI Features

GenAI Workbench

- LLM Customization
- LLM Model Repositories

GenAI Conversational Assistant

- Document/Text Summarization
- Contextual Q&A
- Instructional Recommendations
- Email Synthesis

Intelligent search

- Generate a text response, based on the document type, the query, and the input parameters
Ability to cite source references, and specify the response section(s)

Impact

Reduce Document Processing Cost by 70%

Facilitate decisions by understanding and learning from volumes of proprietary documents

Supercharge productivity of Knowledge workers

Quantiphi is an award-winning AI-first digital engineering company driven by the desire to reimagine and realize transformational opportunities at the heart of the business. Since its inception in 2013, Quantiphi has solved the toughest and most complex business problems by combining deep industry experience, disciplined cloud, and data-engineering practices, and cutting-edge artificial intelligence research to achieve accelerated and quantifiable business results.
